I did not know how to express my dismay, resentment. I know that now. I put this header on *Poudres & Grains* Journal because P&G is Charlie. And I stripped many of its papers, leaving only a few that are emblematic of its fight: Editorials, articles against the administrative academic authority and against exclusion.

All this to say that I was impressed by the will of freedom of thinking displayed these days. I hope this will help to make understand to scientific administration its mistake by attacking me via the medical committee. It is unworthy of a developed country. It must be fought to the death.

I feel invigorated but still grappling with administrative ayatollahs of CNRS and ecp, and always in danger of death.

Thank you for helping me through this anonymous vote:

Powders & Grains & Charlie: Same fights!
Let Pierre Evesque work freely
Fix the disturbed administrative system.

Pierre Evesque's personal resentment :

1) As my work is denied as long as one refuses to evaluate some scientific results ..., one denies my real existence and violates human rights; No matter one believes that it is for medical reasons or not since it is not established. This is just intellectual terrorism equally unacceptable that other less perverse terrorism (the killing). Because the action is the same: it is to deny (i.e. physically kill) the life of another.

Poudres & Grains and scientists cannot be resolved to work with such a concept of "life". This is why **P&G is in mourning** and that a large part of its articles are no longer available on web.

Will it disappear totally?

2) I can revisit this argument from a different perspective, that of schizophrenia. Indeed, we know that science cannot be built by combining contradictory assumptions, (such as $1+1=2$ and $1+1=3$). But it is the same for a man; and a man who develops two personalities in contradiction is schizophrenic. One can easily apply these concepts to legal or virtual entities, so to the administration. In this case schizophrenia may not be obvious for a single man, as many people apply parts of rules simultaneously only. But for those who want to learn more how this society/system works, those will be confronted with this ambient schizophrenia of the society/system; and they will be able to characterize it.

They will be also able to destroy any correct statement of this society/system, just by combining it with the (known or unknown) incorrect equality.... which is assumed/proposed by this schizophrenic society. And struggles for life will appear.

The intellectual terrorism, non-compliant assumptions, poorly written laws are doers of schizophrenic disorders; and our occidental society produces such laws at high rate nowadays.... Elder societies religions are probably safer; however the technological advance make the system erratic, dangerous and uncomfortable. Our politicians should remind this. It may occur likely in our fast-changing societies... War is easy and peace unstable in population dynamics of predators.

Some news from Paris penal court: prosecutor from from Paris criminal court decided to drop my criminal complaint for harassment, not because it was not identified as such, but it is "done" by another administration; here the sentence: **case closed**

"The examination of this procedure does not justify criminal prosecution because:. The facts you complained were managed by another administration, different from justice; as a result the prosecutor believes justice cannot be helpful to judge/treat this case.

Paris, 12/24/2014 signed: Procuratorate prosecutor, Court of Appeal of Paris Tribunal de Grande Instance de Paris "

As I understand it , the criminal court refuses to interfere with another administration and leaves an employee to fend for himself while undergoing the official harassment of his administration unless the employee is doing itself a civil party, which means that he resigned, or is a masochist!

One can not therefore almost to assert its right to these new administrations, and no one can verify that the system is working properly.

Is this the new version of human rights and citizen. It looks just like the one before the XVIII century, and before the French revolution.

This can only be to the liking of Charlie nor of Poudres & Grains, nor for any respectable scientist!

There seems to be a fact appreciated from scientific publishers/editors, "scientists representing the administration for research funding,...." With these principles, it is clear that our scientists ayatollahs give it back to terrorists

And Charlie , does the sentence will the same? forgetting a few months?
We need correct rules to fight against terrorists, otherwise we are also terrorists

So, for me, arbitrary decision, arbitrary rules which do not preserve our understanding, illegal administrative decision, execution by terrorist, and war against terrorism are forms of racisms, hence of denying human rights and human condition.

The harassment stress depends on its intensity, so it may depend on the method, but it can reach the ultimate request; and it starts as soon as debate and explanations are violated.

This is why we shall fight activating correct scientific deontology, a signed goal, but completely forgotten. Our administrations have perjured.

In the category of animal species, humans are predators, and the most efficiency one. Science and technology increase our weapons and destruction means, without limit when we forget the rules... We need to stabilise our world for lasting more than a generation. We need to learn speaking in language.
